

Proburst® is a blend of selected plant extracts to support female hormone balance with a positive effect on the female breast. Can naturally promote breast growth and firmness.

Basics:

The right balance of important hormones is essential to support breast growth during puberty. Throughout life, the female body undergoes radical hormonal changes. Many of these changes can be attributed to massively altered foods, synthetic agents, chemicals in the environment and the stress of modern life. As a result, about 80 per cent of all women are dissatisfied with their breasts and seek natural ways to improve their appearance.

Certain plant substances have been used in naturopathy for decades to promote normal hormone balance in women. Phytoestrogens are hormone-like substances that have a high similarity to estrogens and can therefore positively intervene in hormone balance. At the same time, they can also influence the female breast by helping to promote the development of mammary gland tissue and naturally enlarge the breast. When the hormone balance in the body is restored, it can work more optimally again. The result can be an increase in breast size and fullness.

The following plant substances can have a positive effect on the female breast:

Benedicte herb (Cnicus benedictus): This plant was successfully used as early as the 17th century to support the normal function of various glands and to maintain a normal hormonal balance.

Dandelion root (Taraxacum officinale): Contains a range of vitamins and minerals. Among many other benefits for the body, the plant can stimulate metabolism and cell renewal in the breast, and have a positive effect on the growth of new breast tissue.

Damiana (Turnera aphrodisiaca): Already used by the ancient Maya to maintain female hormonal balance, thus supporting the proper development of the mammary glands.

Dong Quai (Angelica sinensis): Also known as "female ginseng". Has a high content of vitamins and minerals and may help maintain normal cellular function of the female reproductive system. Dong Quai is believed to have a balancing effect on the female hormonal system. The plant can thus promote blood circulation and stimulate the growth of the breasts.

Lemon balm (Melissa officinalis): The plant can have a calming effect and make the skin more resistant, which can lead to a tightening of the breast, among other things.

Saw palmetto (Serenoa repens): The plant's valuable ingredients can help support normal hormone balance and thus promote breast size.

Wild yams: The tuber-forming climbing plant has a positive effect on the female hormone balance and can therefore also positively support breast growth. In addition, this plant can improve certain symptoms of menopause.

If the absorption of these nutrients through the diet is not sufficient or there is an increased need, these nutrients can be supplemented through special food supplements.

Notes:

Food supplements are not intended as a substitute for a balanced and varied diet and a healthy lifestyle. Do not exceed the recommended daily intake. Keep out of the reach of children. Store protected from light and dry at room temperature.

The published information is not a cure and is not intended as a request or suggestion for selfmedication.

Although some of the above statements on individual micronutrients are derived from scientific studies, they have been categorised as "not yet sufficiently proven" by official authorities such as the European Food Safety Authority (EFSA), meaning that no positive effect can be confirmed.

The product described here has not been conclusively evaluated by the Food and Drug Administration (FDA; USA) or the European Food Safety Authority (EFSA; Europe). This product is not intended to diagnose, treat, cure or prevent any disease.

Errors and typographical errors excepted. VBX-1-24

Ingredients:

One capsule contains:

	per capsule	daily dose
Saw palmetto extract	200 mg	800 mg
Damiana leaf extract	75 mg	300 mg
Dong quai root extract	40 mg	160 mg
Blessed thistle extract	30 mg	120 mg
Dandelion root extract	30 mg	120 mg
Lemon balm extract	45 mg	180 mg
Wild yam root extract	10 mg	40 mg

Other ingredients:

Microcrystalline Cellulose, Magnesium Stearate, SiO₂.

The product is vegetarian, gluten-free, lactose-free, not genetically modified.

Capsule shell vegetarian.

Recommended consumption:

In normal cases take 2 capsules in the morning and 2 capsules in the evening with plenty of fluid for a period of 6-9 months.

After having reached the desired results, take Proburst® for maintenance very 3-4 months for a period of 2-3 weeks.
